

CONNEXION – 2K26

STANDARD OPERATING PROCEDURE (SOP)

OVERALL GENERAL POINTS :

1. Participant Conduct & Discipline

All participants must maintain professional and respectful behaviour towards volunteers , coordinators and fellow participants.

Communication must remain polite and technically appropriate at all times.

Any clarification or concern about the event must be raised through event officials without confrontation

Follow instructions from marshals and officials promptly and respectfully to ensure smooth conduct.

Usage of mobile phones unnecessary, loud conversations or distractions during the competition are prohibited.

2. Dress Code :

Recommended attire: Formal or casual shirts with trousers or jeans.

Clothing should be neat and appropriate for a collegiate technical event.

Closed-toe footwear is mandatory for maintaining the event decorum..

3. Safety Guidelines

Everyone on-site is responsible for safety — remain alert and cautious around live robots and equipment. .

Report hazards or unsafe behaviors immediately.

Maintain clear access to emergency exits and safety equipment at all times.

Onsite medical first aid will be available if required.

4. Registration & Robot Inspection

No online screening; all registered teams present on event day may participate.

Mandatory on-site inspection checks focusing mainly on robot weight compliance and basic safety.

Height is flexible but must be reasonable to fit within arena and event constraints safely.

Robots exceeding weight limits must be modified to qualify for competition.

5. Event Discipline

Teams must be punctual and report at assigned slots.

Only one team per member may handle the mobile phone for answering the questions during the round 1 and 2.

For answering the question, one member per team should speak loudly during the round 3. Rankings and quick in time will be final to declare the winner.

SOP – CONNEXION

Round 1 – Analysis:

Objective:

To assess the team's understanding of basic electrical concepts through quiz questions.

Process:

Participating teams will be shared with an online website of QR code for answering the quiz questions.

By entering with their unique team name, Participants will allow to attend the quiz section.

There will be around 20 questions of general electrical core components.

Teams must discuss among themselves to attend the questions through one mobile phone per team.

Winners will be based on the rankings of the quiz.

Rules:

Incorrect or exceeded question time limit will not be validate at all.

Exchange of answers between teams is strictly prohibited.

Usage of internet for answering the questions will leads to direct disqualification of the event.

Round 2 – Design:

Objective:

To gather technical knowledge of electrical components through hidden meanings from the images.

Process:

Teams must attend this round with digital buzzer that should be installed in their mobile phone after the completion of round 1.

Different images related to electrical components, principles, formulae will be displayed in an Projector Screen.

10- 15 questions will be presented during this round and each question will have 5 points.

Participants must press the buzzer for answering the question and it will based on first come, first serve.

For example, first team pressed buzzer at 2 seconds, they will allowed to answer the question..

If first team fails to answer correctly, it will pass to the next team which will be based on time (example of 3 seconds) it will go on upto first 3 teams until anyone of them answer correctly or question will be skipped.

Winners of this round based on high points scored by the participating teams.

Rules:

Each question will have time limit of 2 minutes. Answers must be said with correct logic.

Though teams which knows the answer should remain silent until they turn comes and without pressing buzzer, answers need not to be discussed among participating team members.

Round 3 – BUILD UP:

Objective:

To evaluate in-depth knowledge of electrical subjects including components ,theorems and formulae using analytical thinking skills.

Process:

Each team will be provided with a sealed paper slip. This round will have no time limit.

For example, one team will be given two electrical components by either in jumbled words or numerical code of alphabets.

Meanwhile, in the Projector Screen, Images of various components will be displayed and participating teams must figure out their third component with the first two components.

After figuring out all three components, teams must explain the purpose or principle of the components for finishing the event.

The judges or event coordinators will assess the teams and announce the winners based on their performance.

Winning condition:

Fastest team to solve the round will be announced as winners.

In case of tie:

Previous level rounds will be taken as an point to declare winner for the event.
